This Data Note describes the trends for a set of key nutrition and health outcomes, determinants, and coverage of interventions. The findings here are based on data from the National Family Health Survey (NFHS) 3 (2005-2006), 4 (2015-2016), and 5 (2019-2020). In addition to standard prevalence-based analyses, this Data Note includes headcount-based analyses aligned to the POSHAN Abhiyaan monitoring framework and uses data from NFHS-5 to provide evidence that helps identify priority districts and number of districts in the state with public health concern as per the WHO guidelines. The Data Note includes a color-coded dashboard to compare the coverage of nutrition interventions across all the districts in the state. It concludes with key takeaways for children, women, and men and identifies areas where the state has potential to improve.

Note: Adult nutrition outcomes are based on the woman dataset, while child nutrition outcomes are based on all child data.
2In NFHS-3, 54.1% of data was missing, while 19.8% of data was missing in NFHS-4.
3NA refers to the unavailability of data for a particular indicator in the specified NFHS round.

Source: IFPRI estimates - The headcount was calculated as the product of the undernutrition prevalence and the total eligible projected population for each district in 2019. Prevalence estimates were obtained from NFHS-5 (2019-2020; all child data) and projected population for 2019 was estimated using Census 2011.

Note: Gray area in Maps 1-4 indicates districts for which data are not available. \(^1\)Public health concern is defined as ≥20% for stunting, ≥40% for anemia, ≥10% for wasting, and ≥2% for severe wasting (WHO 2011). \(^2\)The total number of children <5 years is 291,416.

¹NA refers to the unavailability of data for a particular indicator in the specified NFHS round.

²Public health concern is defined as prevalence ≥15% for overweight/obesity (children), ≥20% for overweight/obesity (women and men), ≥ 20% high blood pressure (women and men), and ≥20% high sugar (women and men) (WHO 2011). ²2 Districts: North and South Tripura.

Note:
1. Adult nutrition outcomes are based on the woman/man dataset, while child nutrition outcomes are based on all child data.
2. NCDs: non-communicable diseases
3. The difference is calculated only between districts that are comparable between 2015-2016 and 2019-2020. Only the Dhalai district in Tripura is comparable between the two time periods.
4. The headcount was calculated as the product of the overweight/obesity and NCDs prevalence and the total eligible projected population for each district in 2019. Prevalence estimates were obtained from NFHS-5 (2019-2020) and projected population for 2019 was estimated using Census 2011.
5. Public health concern is defined as prevalence ≥15% for overweight/obesity (children), ≥20% for overweight/obesity (women and men), ≥ 20% high blood pressure (women and men), and ≥20% high sugar (women and men) (WHO 2011). ²2 Districts: North and South Tripura.

</table>

Note: Immediate determinants are based on the last child data; data on continued breastfeeding at 2 years, egg and/or flesh foods consumption, sweet beverage consumption, and bottle feeding of infants not available in NFHS-5 factsheets (2019-20)/state report

¹Indicator definition differs slightly between NFHS-4 and NFHS-5.

²The difference is calculated only between districts that are comparable between 2015-2016 and 2019-2020. Only Dhalai district in Tripura is comparable between the two time periods.

³For all indicators, top coverage districts refer to the districts with the highest prevalence in immediate determinants, except for women with a BMI of 18.5 kg/m², diarrhea in the last two weeks, and ARI in the last two weeks, for which it refers to the districts with the lowest prevalence in coverage.

°Indicator comparable between NFHS-3 and NFHS-4 but differs slightly from NFHS-5.

Note 1: Interventions' coverage is based on the last child data.

Note 2: The following information is not available in the NFHS-5 factsheets and state reports (2019-20): receipt of at least one ANC visit, birth preparedness counselling, malaria prevention and food supplementation (6-35m). Information on use of bed nets during pregnancy is not available in NFHS-3 data (2006).

Note 3: Data on food supplementation and health and nutrition education during pregnancy and post-natal care, and weight measurement during childhood and counselling on child growth for 2019-2020 are taken from NFHS-5 state reports.

Note 4: Refer to district dashboard for the inter-district variability in the coverage of interventions.
### Intervention coverage at district level, 2019-2020

#### Note 1:
The following information is not available in the NFHS-5 factsheets and state reports (2019-20):
1. Information on preconception and pregnancy-related indicators including demand for FP satisfied, receipt of at least one ANC visit, weighing, birth preparedness and breastfeeding counselling, counselling on keeping baby warm, cord care counselling, food supplementation, health and nutrition education and malaria prevention.
2. Lactation-related indicators including, food supplementation and health and nutrition education.
3. Early childhood-related indicators including pediatric IFA, deworming, food supplementation (6-35m), weighing and counselling on child growth. Information on use of bed nets during pregnancy not available in NFHS-3 data (2005-2006).

#### Note 2:
Food supplementation during early childhood is for children aged 6-35 months; counselling on child growth during early childhood is conducted after taking weight measurement.

**Key takeaways**

**Children**: Stunting prevalence declined by 12pp from 2006 to 2016 but increased by 8pp from 2016 to 2020. Wasting and underweight declined by 7pp and 15pp, respectively, from 2006 to 2016, and remained stable thereafter. Anemia declined by 15pp from 2006 to 2016 but increased by 16pp from 2016 to 2020.

**Women**: Underweight declined by 18pp from 2006 to 2016 and continued to decline by 3pp from 2016 to 2020. Anemia among non-pregnant and pregnant women declined by 11pp and 4pp, respectively, from 2006 to 2016, but increased by 12pp and 8pp, respectively, from 2016 to 2020. Overweight/obesity increased by 9pp from 2006 to 2016 and continued to increase by 6pp from 2016 to 2020.

**Men**: Overweight/obesity increased by 11pp from 2006 to 2016 and continued to increase by 7pp from 2016 to 2020.

**Attention is needed to improve** (%s in 2020):

- **Outcomes**: Anemia in children (64%); anemia in non-pregnant (67%) and pregnant (62%) women
- **Immediate determinants**: Early initiation of breastfeeding (36%); adequate diet (14%); 100+ IFA (27%)
- **Underlying determinants**: Women with ≥10 years education (23%); girls 20-24 years married before age of 18 years (40%)
- **Coverage of interventions**: ≥4 ANC visits (53%) and health and nutrition education for women (51-55%); Zinc during diarrhea (17%)

<tr>
<td>Counselling on keeping baby warm(^{5})</td>
<td>Percentage of women who met with a community health worker in the last three months of pregnancy and received advice on keeping the baby warm for their most recent live birth in the five years preceding the survey</td>
</tr>
<tr>
<td>Cord care counselling(^{5})</td>
<td>Percentage of women who met with a community health worker in the last three months of pregnancy and received advice on cord care for their most recent live birth in the five years preceding the survey</td>
</tr>
<tr>
<td>Food supplementation - pregnancy(^{5})</td>
<td>1(^{\circ})Percentage of youngest children under age 5 whose mother received supplementary food from AWC during pregnancy; 2(^{\circ})Among children under 6 years, percentage whose mother received specific benefits from AWC during pregnancy: supplementary food</td>
</tr>
<tr>
<td>Health &amp; nutrition education – pregnancy(^{5})</td>
<td>1(^{\circ})Percentage of mothers who received health and nutrition education from an Anganwadi Centre (AWC) during last pregnancy in the five years preceding the survey; 2(^{\circ})Among children under 6 years, percentage whose mother received specific benefits from AWC during pregnancy: health and nutrition education</td>
</tr>
<tr>
<td>Malaria prevention- use of bed nets(^{5})</td>
<td>Percentage of women who used mosquito net during the pregnancy for their most recent live birth in the 5 years preceding the survey</td>
</tr>
<tr>
<td>Institutional birth(^{5})</td>
<td>1(^{\circ})Percentage of women aged 15-49 who gave birth in health/institutional facility for their most recent live birth in the 5 years preceding the survey; 2(^{\circ})Percentage of live births to women aged 15-49 in the five years preceding the survey that took place in a health/institutional facility</td>
</tr>
<tr>
<td>Financial assistance (JSY)(^{5})</td>
<td>Percentage of women who received financial assistance under JSY for their most recent live birth that took place in institutional facility in the 5 years preceding the survey</td>
</tr>
<tr>
<td>Skilled birth attendant(^{5})</td>
<td>1(^{\circ})Percentage of women whose last delivery was attended by a skilled health personnel for their most recent live birth in the 5 years preceding the survey; 2(^{\circ})Percentage of births attended by skilled health personnel for births in the 5 years before the survey</td>
</tr>
<tr>
<td>Postnatal care for mothers(^{5})</td>
<td>Percentage of mothers who received postnatal care from a doctor/nurse/LHV/ANM/midwife/other health personnel within 2 days of delivery for their most recent live birth in the five years preceding the survey</td>
</tr>
<tr>
<td>Postnatal care for babies(^{5})</td>
<td>Percentage of children who received postnatal care from a doctor/nurse/LHV/ANM/midwife/other health personnel within 2 days of delivery for last birth in the 5 years before the survey</td>
</tr>
<tr>
<td>Food supplementation – postnatal(^{5})</td>
<td>3(^{\circ})Percentage of youngest children under age 5 whose mother received supplementary food from AWC while breastfeeding; 2(^{\circ})Among children under 6 years, percentage whose mother received specific benefits from AWC while breastfeeding: supplementary food</td>
</tr>
<tr>
<td>Health &amp; nutrition education – postnatal(^{5})</td>
<td>3(^{\circ})Percentage of youngest children under age 5 whose mother received health check-ups from AWC while breastfeeding; 2(^{\circ})Among children under 6 years, percentage whose mother received specific benefits from AWC while breastfeeding: health and nutrition education</td>
</tr>
<tr>
<td>Full immunization(^{5})</td>
<td>1(^{\circ})Percentage of youngest living children aged 12-23 months fully vaccinated based on information from either vaccination card or mother’s recall; 2(^{\circ})Percentage of children aged 12-23 months fully vaccinated based on information from either vaccination card or mother’s recall</td>
</tr>
<tr>
<td>Vitamin A – early childhood(^{5})</td>
<td>1(^{\circ})Percentage of youngest children aged 6-59 months who received Vitamin A supplementation in the last 6 months preceding the survey; 2(^{\circ})Percentage of children aged 9-35 months who received a vitamin A dose in the last 6 months</td>
</tr>
<tr>
<td>Pediatric IFA(^{5})</td>
<td>Percentage of youngest children aged 6-59 months who received iron supplements in the past 7 days preceding the survey</td>
</tr>
<tr>
<td>Deworming – early childhood(^{5})</td>
<td>Percentage of youngest children aged 6-59 months who received deworming tablets in the last 6 months preceding the survey</td>
</tr>
<tr>
<td>Care seeking for ARI(^{5})</td>
<td>1(^{\circ})Percentage of youngest children under age 5 years with fever or symptoms of ARI in the 2 weeks preceding the survey taken to a health facility or health provider; 2(^{\circ})Percentage of children under age 5 years with fever or symptoms of ARI in the 2 weeks preceding the survey taken to a health facility or health provider</td>
</tr>
<tr>
<td>ORS during diarrhea(^{5})</td>
<td>1(^{\circ})Percentage of youngest children under age 5 years with diarrhea in the 2 weeks preceding the survey who received oral rehydration salts (ORS); 2(^{\circ})Percentage of children under age 5 years with diarrhea in the 2 weeks preceding the survey who ORS</td>
</tr>
<tr>
<td>Zinc during diarrhea(^{5})</td>
<td>1(^{\circ})Percentage of youngest children under age 5 years with diarrhea in the 2 weeks preceding the survey who received zinc; 2(^{\circ})Percentage of children under age 5 years with diarrhea in the 2 weeks preceding the survey who received zinc</td>

ABOUT POSHAN
Partnerships and Opportunities to Strengthen and Harmonize Actions for Nutrition in India (POSHAN) is a multi-year initiative that aims to support the use of data and evidence in decision-making for nutrition in India. It is supported by the Bill & Melinda Gates Foundation and led by IFPRI in India. http://poshan.ifpri.info/

ABOUT DATA NOTES
POSHAN Data Notes focus on data visualization to highlight geographic and/or thematic issues related to nutrition in India. They draw on multiple sources of publically available data.
