Despite forest act, trees of Arunachal face the cut

Explaining the procedure, T. Pertin, DFO Tezu, said, “Families, who have encroached after FRA became applicable, is an offence report by the beat forester, which if verified, goes to the Deputy Commissioner, who then enrolls them to get ownership of the land that was encroached.”

However, the poor track record of complaints and subsequent cases under the grievance, Pertin added, “That is because there are many black holes in the department.”

A case report in the Turung forest reserve from the Wangeri and Wangir villages, shows that the trees have been encroached upon in recent times. Speaking over 140 sq km, the reserve is part of a large contiguous forest in the region. Inadequate and delayed enforcement has been a major issue. The state forest office has not been able to get ownership of the land that has been encroached. From the forest department’s stand, it needs to take any sort of residential proof,” a local resident explained.

The practice — prevalent in Arunachal Pradesh, which has seen large-scale encroachment from the area, reserved forest or land by expanding families, fuel wood, agriculture, and hostels for the Kasturba Gandhi Montessori School, the world’s largest school in terms of pupils, construction of toilets are also run under similar term.

The recently enacted Right to Education Act requires the states to ensure that all children of both, Scheduled Caste (SC) and Scheduled Tribe (ST) communities, be enrolled at the age of six, and continue to remain in school until the age of 14. The Act is expected to help reduce the dropout rates of SC and ST students. According to the latest National Education Policy (NEP), the government aims to achieve 100% enrollment for children aged 6-14 in primary education by 2030.

However, the challenge lies in the implementation of the Act, as many states and UTs struggle to meet the target. The Ministry of Education (MoE) and the National Education Mission (NRM) have been working towards improving the enrollment rates. However, the state government needs to take immediate action to improve the enrollment rates in the region. The government has already initiated various programs aimed at increasing enrollment rates, such as the Rashtriya Madhyamik Shiksha Abhiyan (RMSA) and the Anganwadi Program. These programs focus on providing education and nutrition to children aged 6-11.

The government has also introduced the National Education Portal (NEP) to ensure that all children are enrolled in school and receive quality education. The portal provides information on various education-related topics, including enrollment rates and access to educational resources.

The government has also been implementing various initiatives to increase enrollment rates, such as the Swachh Bharat Abhiyan (SBA) and the Rashtriya Swastikalyan Abhiyan (RSA). These initiatives focus on improving the health and sanitation of children, which is an essential factor in improving enrollment rates.

According to the latest report, the enrollment rate in the region is still below the national average. The government needs to take immediate action to improve the enrollment rates in the region. The government has already initiated various programs aimed at increasing enrollment rates, such as the RMSA and the Anganwadi Program.
