Part 1
Preface

The Taking the Temperature Report has been developed in partnership by the British Council, Federation of Indian Chambers of Commerce and Industry (FICCI) and the Art X Company, to record the impact of the Covid-19 pandemic on the creative economy in India. The report will provide valuable insight:

- on the impact of the pandemic on creative sectors, arts companies and individual artists, managers and stakeholders.
- by tracing and reporting developments, and change over a sustained period, initially to October 2020.
- on systemic actions being taken to strengthen the creative economy, during and post Covid-19.
- by making recommendations for the future development of the creative economy.

This is the first edition of the report; it provides a snapshot of the situation in India since the outbreak of Covid-19 and the consequent lockdown, from late March 2020 up until early June 2020.

Towards the end of July 2020, the Taking the Temperature report will be available online in Hindi, Bangla, Malayalam, Telugu, Kannada and Tamil languages.

Further editions of Taking the Temperature report will be published towards the end of October 2020 and end of December 2020. The complete report with all editions will be released in January 2021.

Art is a necessity. We need art to illuminate the way to a different future. We need art in order to remind us of our humanity. Artists are our lifeline. They are our hope. They allow us to feel what we do not yet know. Art is essential. It is definitely not a luxury.

Angela Davis (writer, activist, philosopher and feminist). Speaking at WOW (Women of the World) Global 24, June 2020
Acknowledgements

The partners thank all the respondents for making time to complete the survey, sharing valuable insights on the experience of working during Covid-19 situation. We will return to the respondents who have agreed to participate in the research again. The partners are grateful for the support received for survey development, and distribution amongst the arts and cultural networks in the country, from:

- Craft Revival Trust strengthening the research by widening access including survey translations into Hindi, Bangla and Tamil
- The Department for International Trade (DIT)
- Events and Entertainment Management Associations (EEMA)
- The Association of Indian Publishers
- Impulse NGO
- Crafts Council India
- The Charles Wallace India Trust
- The Japan Foundation, India
- North India Section of Textile Institute (NISTI)
- Arts and Culture Resource India
- International Council on Monuments and Sites (ICOMOS)

Partners

**British Council**
The British Council is the UK's international organisation for cultural relations and educational opportunities. We work with over 100 countries in the fields of arts and culture, English language, education and civil society. Last year we reached over 80 million people directly and 791 million people overall including online, broadcasts and publications. We make a positive contribution to the countries we work with – changing lives by creating opportunities, building connections and engendering trust. Founded in 1934 we are a UK charity governed by Royal Charter and a UK public body. We receive a 15 per cent core funding grant from the UK government.

**Federation of Indian Chambers of Commerce and Industry**
Established in 1927, FICCI is the largest and oldest apex business organisation in India. Its history is closely interwoven with India's struggle for independence, its industrialisation, and its emergence as one of the most rapidly growing global economies. A non-government, not-for-profit organisation, FICCI is the voice of India's business and industry. From influencing policy to encouraging debate, engaging with policy makers and civil society, FICCI articulates the views and concerns of industry. It serves its members from the Indian private and public corporate sectors and multinational companies, drawing its strength from diverse regional chambers of commerce and industry across states, reaching out to over 2.50,000 companies. FICCI provides a platform for networking and consensus building within and across sectors and is the first port of call for Indian industry, policy makers and the international business community.

[www.ficci.in](http://www.ficci.in)

**The Arts X Company**
The Art X Company is a strategic consultancy which undertakes consulting, curation and project management and research within the cultural sector in India. We also run a 53,000+ network of creative professionals via a Facebook group titled Arts and Culture Opportunities, Residencies, Workshops, Jobs in India a.k.a. Arts and Culture Resources India (ACRI) and a website. The Art X Company has worked extensively across the country, and for a range of clients in the for-profit, non-profit and government spaces. The organisation comprises a six-member team of highly passionate arts managers, strategists and researchers, and has presence in Mumbai and Bengaluru.

Part 2

Executive summary

The Covid-19 pandemic is having an unprecedented impact on the creative economy worldwide. The British Council, FICCI and Art X Company have partnered to report on the impact of Covid-19 on the creative economy in India.

In 2017, FICCI and KPMG reported the forecast for 2018 for the creative economy at INR 275 billion (27,500 crore) and the crafts economy growth to INR 239.6 billion (23,960 crore). Growth was forecast at 2.5% for the creative economy and 10% for craft.

During the Covid-19 pandemic, the creative industries face an uncertain future. Sectors are contracting, organisations are facing difficult choices to ensure they survive, and individual professionals are contending with short-term survival and decisions about whether they can afford to continue to work in the creative sector. The creative economy will be very different in the aftermath of Covid-19 and some sectors may be decimated.

India’s GDP forecast in May 2020 shows the economy slowing to a 40-quarter low of 3.1% (y/y) in Q4 of FY2019-20 (Jan-Mar 2020). This takes India’s annual growth for FY 2019-20 to 4.2%, the lowest since 2008.

Executive summary

Research snapshot

Micro, small to mid-size enterprises

- MSMEs, the freelance workforce who cater to large companies have been worst hit.
- MSMEs make up 88% of the creative sector; with 32% expected to lose 50% of annual income in the first quarter.
- 53% of events and entertainment management sector experienced 90% of their business cancelled between March-July 2020.
- 41% of the creative sector has stopped functioning during lockdown.
- 61% of organisations established between 4-10 years have stopped during lockdown.

Measures to support

- If available, short-term financial relief would be used to keep freelancers and organisations viable. 80% would use financial support toward lost income, staff costs and immediate business needs.
- Cases of state interventions such as the Kerala Government and creative sector self-help programmes such as StayIN aLIVE provide powerful examples of what is possible with strategic support and collective action.

Mid to long term

- 88% of the sector fears social distancing will impact the creative economy over the long-term.
- The creative sector is made up of innovators who are resilient, adaptable and inventive organisations pivoting online such as India Craft Week, the JLF Brave New World and NH7 Weekender show a spirit of solidarity between artists and audiences to continue to create and connect. However, the short-term impact of Covid-19 on the creative economy globally and in India cannot be underestimated and looks extremely bleak.
The partners are mindful this first Taking the Temperature Report is a snapshot study and is one of the many important creative industry researches currently underway in India. The partners aim for this report to be a valuable addition to the quantum of research, insight and thought leadership. In this first Taking the Temperature report, we have charted how India has responded to the crisis.

The global pandemic has had a dire short-term effect on the cultural sector both in the UK and around the world with theatres, cinemas and libraries closed; festivals and events cancelled; and artists and audiences confounded by social distancing and lockdowns. The impact of Covid-19 on the cultural sector in the UK has been profound with the closure of venues and the cancellation of major events like Glastonbury and the Edinburgh Festivals. The UK sector is not alone in this – Covid-19 has affected artists and institutions around the globe.

The pandemic has spread across continents, regions and nations in different stages, timeframes and levels of impact. As the UK’s international organisation for cultural relations the British Council global network in East Asia, the Americas, Europe and East Africa are currently tracking the impact of Covid-19 on the creative economy.

Insights Articles: in a series of insight articles the British Council has reported on the impact of Covid-19 on the cultural sector in China and East Asia

- **China**: British Council Insight Article China
- **East Asia**: British Council Insight Article East Asia

**Participation and limitations**

Up until 12 June 2020, 368 surveys were completed, 318 through the British Council and 50 through the Art X Company. This equates to about 7% of the 9,500 surveys sent in the first round. Within our survey population we have a confidence rate of 95%.

96% respondents consented to participate in the survey, and 91% said they would be willing to complete the survey again.

Some of the questions in the survey ask for Other as an option, in a few cases this has skewed findings. We will change this in the second iteration of the survey.

We are aware this is a snapshot of the current situation of the initial three months, and the survey has been completed by English language speakers only to date. The survey translations will be available online in Hindi, Bangla, Malayalam, Telugu, Tamil and Kannada, as well as English, as we aim to reach out further across India to ensure maximum quantitative and qualitative impact. The survey link is here.

Most partners who have responded in the survey have a wider network of institutions than individuals and hence the survey results may reflect a more top-down approach. To mitigate this top-down approach in the next two editions, we will adapt the research methodology using 1) the Indian languages version of the survey and 2) roundtable focus groups.

**Lack of research studies**

Few robust impact analysis studies have been conducted in India for cultural projects — which are in the public domain — providing little precedent for us to contextualise our research while working to gain fresh insights into the subject. In fact, the impact analysis study conducted for Serendipity Arts Festival in 2018 and the Kochi-Muziris Biennale in 2017 are the only reports on major cultural projects in the last five years and both focus on visual arts. Hence, we had to develop an entirely new research approach relevant to an Indian multi-dimensional art sector, while keeping in mind the context of the cultural ecosystem in this decade.

**Lack of adequate government data**

The research team accessed some government data available e.g. national financial investment in Culture for the past and current year, and some state investment in Culture during Covid-19 e.g. Kerala. We understand several data sets are either not being collected or do not exist e.g. other state governments Covid-19 programmes and changes to national investment in Culture as a result of Covid-19.

**Terminology and definitions**

1) creative economy and 2) creative industries referred to in this report means 1) the totality of sectors including organisations and individual professional which make up the creative economy and 2) the segmentation of different sectors e.g. advertising, literature and publishing and performing arts.
Respondent demographics

Broadly, the respondents map against the demographics of India, with a skew toward men working in the creative industries and the relatively young population of India (65% below age of 35 years).

Gender

- Male: 40%
- Female: 58%
- Prefer not to say: 1%
- Other: 1%

Diagram: Gender

Numbers of years in the creative sector

The high percentage of respondents, that have been working and operating in the creative industries for less than 3 years, reflects the growth in the enterprise culture in India. This is also an indicator of organisations that are likely to be most at risk as a result of the pandemic, whereas 24% of organisations that have been running for 11+ years are likely to have greater resilience to survive through Covid-19.

- 0-3 years: 24%
- 4-10 years: 11%
- 11+ years: 64%
- Other: 1%

Diagram: No. of years in creative sector

Seniority of management representation

The survey has been completed by CEO/managing directors and senior managers (50% respondents). In response to Covid-19 they are the critical decision makers for their business operations and programmes; in the long-term they will need to lead their organisations towards new business models.

- CEO / Managing Director: 41%
- Senior Management: 25%
- Junior staff: 6%
- Freelancer: 5%
- Consultant: 12%
- Not Applicable: 9%
- Other: 2%

Diagram: Seniority
Taking the Temperature research summary

Type of organisation and activity

Most organisations’ business models operate in multiple ways e.g. in some cases an organisation’s work included artists management, education and research. Individual artists’ work included consultancy, cultural presenting and production and membership of artist hubs. Broadly all organisations and artists worked in multiple functions representing the entrepreneurial nature of the enterprise creative economy.

Creative sector

Mapped against the Department for Digital, Culture, Media and Sport (DCMS) segments of the creative economy in the UK, largest number of respondents in India were in design (20%) and festivals (17%).
Scale of activity and size of organisations

Geographic focus of activity
India is a huge and complex country with multiple languages, distinct cultures, 29 states and 7 union territories. Infrastructure and investment in creative industries varies widely between cities and states. Mumbai, Delhi, Kolkata and Chennai are major city-hubs for culture of national significance to creative economy. Second and third metros such as Pune, Bengaluru, Hyderabad, Chandigarh and Ahmedabad are also significant centres for culture. Taken together, 24% of organisations work in city or state geographies, 67% nationally and 9% internationally.

Diagram: Geographic focus of activity

Scale
Mainly, the creative sector consists of Micro, Small to Mid-size Enterprises (MSMEs) and the self-employed, who make up 88% of the sector. While self-employed workforce organisations with 2 to 10 workers make 74%; they are, by contrast, both vulnerable and agile. It is likely that they are not beneficiaries of major government schemes or subsidies, as for example the Government of Kerala (see Case Study). The MSME parts of the sector could benefit from working together to galvanise support to collectively bid for government funds.

Diagram: Scale

Financial models

Turnover in 2019-2020
Financial turnover reflects the MSME nature of the creative sector in India and maps against the extensive freelance and gig-economy dominante in the creative sector workforce.

Diagram: Turnover

Source of income
The range of sources of income reflect the mixed economy approach of the creative sector, with only 11% of income from private and government grants, 5% from online crowdfunding and 10% from philanthropy. Broadly, the data indicated that approximately 74% income of the surveyed organisations and artists, is likely to have stopped or been curtailed during Covid-19.

Graph: Source of Income
Since the Covid-19 pandemic and India’s lockdown in March 2020

Events cancelled and projects postponed until November 2020?

70% respondents have cancelled or postponed up to 7 events, indicating temporary disruption to business continuity and loss of income since late March 2020. We also received data from the Events and Entertainment Management Association (EEMA) companies wherein 53% organisations had cancelled 90% of their business in last three months. While EEMA represents a specific sector of events and entertainments, they are a key service sector representing the creative industry.

22% lost more than 50% of their income.
One third i.e. 33% respondents have recorded over 50% loss in their annual income; while a significant 15% have incurred a 75% or more loss in their annual income.

Estimated and actual financial loss (INR)

Lost income occurred in the first quarter since post lockdown in March. 32% respondents expect to lose more than 50% of their annual income. Of these, 10% have lost more than INR 20 lakh and 63.1% of EEMA companies i.e. around 107 companies suffered losses of up to INR 1 crore.

MSME and freelancers along with larger companies have been worst hit. However, large companies are more likely to be able to access subsidies to enable them to survive while MSMEs are most at risk having to close.

MSME’s capacity to remain ‘going concerns’ will be dependent on the level of their reserves. Sector guidance indicated that these organisations require a working capital of 3 months to be able to plan a wind-down appropriately. With the lowering reserves, and no signs of business continuity, MSME concerns about closing their operations, is also increasing.

Turnover / Operation during lockdown

Organisations with lower turnover are finding it harder to deal with the crisis.
Sources of lost income

There is serious threat to individual livelihoods and MSME businesses: artist fees, teaching and workshop fees, and professionals' service and consulting fees, generally form a large part of individuals' and micro enterprises' revenue streams. Combining all three lost incomes sources amounts to 43% of total revenue and is a major body blow to the sector.

The arts service sector faces 21% income losses.

Most grant incomes and plans are valid for 1 year duration usually, and starting FY 21-22 any cuts in private and government grants will impact the sector even further.

Businesses still functioning during Covid-19 relative to years in operation

A relatively even spread of all organisations who have stopped functioning.

Ways in which businesses have been impacted

41% of businesses have substantially reduced and/or cut programmes and 16% have had contracts cancelled.

Business operational during Covid-19

Mainly most organisations and freelancers have continued to function in some basic capacity during Covid-19, however, 41% have stopped temporarily altogether.

Table 2: Organisations stopped functioning

**Risk management measures**

36% have used reserves and reduced overheads, 15% have moved to online sales platforms and 13% have cut programmes. Reduction in core costs and move to online sales indicate that business models are likely to be redeveloped over Q2 and Q3.

**Time for business recovery post Covid-19**

In the main, business recovery will take up to 6 months. There is no hard data yet from other developing economies regarding recovery time for the creative sector post Covid-19, so we don’t yet know how India compares.

However, the CINAR survey reports 61% of respondents expect a recovery in the next 12 months, 27% expect a recovery of programming activities by spring 2021. 33% expect recovery in the autumn of 2020 or winter of 2021. The best assumption to date, therefore, is up to 24 months for recovery of sectors and business who survive the crisis.

**Emergency financial relief**

If short-term financial relief were available, it would be used to keep freelancers and organisations viable. 80% would use it to offset lost income, on staff costs and for other immediate business needs.
Social distancing impact

The long-term ‘fear factor’ around social distancing and the impact on the creative sector is clear, with 89% expressing concern regarding the practical implications of social distancing and 67% being seriously concerned about the long-term impact. It is perhaps this emotive area, matched with measure they have taken to date to manage risk, which is of key concern as organisations and freelancers make choices around the viability of continuing in the creative industries. We will track this trend over the coming months.

On a scale of 1 to 5 (1 being low, 5 being high) how concerned are you about the impact of Covid-19 on the Indian culture sector?

The Art X Company Survey Summary

50 responses have been received from the Art X Company. 50% are from Mumbai, 23% from Bengaluru and other cities, and 27% from Delhi NCR.

- **Age**
  - 46% aged of 25-34 years
  - 36% aged of 35-44 years
  - 4% aged of 18-24 years

- **Type**
  - 33% artists
  - 26% Cultural presenters
  - 21% Educators

- **Size of organisation**
  - 40% 1-5 people in their organisation
  - 32% freelancers
  - 2% large organisations
  - 50-100 people
  - 44% artists/ independent creatives
  - 40% not-for-profit
  - 10% for-profit
  - 6% small business owners

- **Cancelled events until end of October 2020**
  - 36% 0-3
  - 38% 4-7 projects

- **Lost gross revenue**
  - 12% more than INR 20 lakh
  - 52% less than INR 5 lakh

- **Sources of lost income and revenue**
  - 30% artist fees
  - 25% professional fees
  - 25% teaching

- **Impact on business / measures taken to manage risk**
  - 48% said impact has been due to event cancellations, while the rest of the impact is divided between business travel, cancellation of tours and loss of business service contracts, equally.
  - 47% to meet basic needs
  - 33% relief to cover losses
  - 20% low interest or no interest loans

- **Loss as a % of annual revenue**
  - 14% more than 75%
  - 14% 50-75%
**British Council:** Type of organisations who have responded are almost equally split between social enterprises, institutes and foundations, artist management, vendor service art, and cultural policy amongst others.

**Art X:** 33% are artists and 26% of the respondents are cultural presenters.

**Comment:** With more respondents, a more diverse range of the creative sector responded to the British Council and hence there was wider diversity in the profile of respondents.

**British Council:** Significant majority of the respondents (31%) are self-employed while 23% employ only 2-5 people. We may assume 54% of the responders are quite vulnerable at this moment in time.

**Art X:** 40% have 1-5 people in their organisation and 32% work by themselves and 2% are large organisations having 50-100 people.

**Commonality:** In both the cases there is a significant number of respondents; 31% in case of British Council and 32% in case of Art X who are self-employed. In both cases the majority of those who do employ have a small a number of people in their organisations.
What category do you fall in?

**British Council:** The largest number of respondents (36%) are artists/freelancers or consultants followed by small business owners at 30%. Another 23% are part not for profit and 11% are profit making organisations.

**Art X:** 44% of the respondents are artists/independent creative, 40% are not for profit while 10% are for profit and 6% are small business owners.

**Commonality:** In both cases the larger number of respondents are Artists/Freelancers/Consultants. A considerable number of respondents are small business owners in the case of British Council which is absent in Art X. On the other hand, a larger number of respondents are from non-profit organisations in the case of Art X.

**Comment:** The Arts and Culture Resource India (ACRI) and Art X network comprise mainly individuals and small organisations i.e. those who are rarely part of existing networks. The British Council audience profile and partner organisations for this study drew from a larger network of mid-size organisations.

Event cancellations and postponements until end of October 2020

**British Council:** 36% said that they had to cancel 4-7 events and 34% 0-3 events.

**Art X:** 38% said they have cancelled 4-7 projects until the end of October 2020, another 36% said 0-3.

**Commonality:** In both cases more than 30% of respondents had to cancel 0-3 events. Another 30% had to cancel 4-7 events.
Financial losses estimated/incurred due to pandemic

**British Council**: In terms of financial loss incurred, 9% said 15.1 to INR 20 lakh, 32% said 5.1 to INR 10 lakh, 10% said 10.1 to INR 15 lakh and 49% said less than INR 5 lakh.

**Art X**: In terms of financial loss, 12% said more than INR 20 lakh, 52% said less than INR 5 lakh.

**Commonality**: In both cases, the financial loss was between INR 0-5 lakh for around 50% of the respondents.

**Organisational impact**

**British Council**: Organisations have been impacted in different ways. The greatest impact has been in terms of cancellation of events (24%) and cancellation of business travel by 14%. 10% have been impacted by not being able to put on art performances, 16% have lost business or service contracts.

**Art X**: 48% said impact has been due to event cancellation while the rest is equally divided between business travel, cancellation of tours and loss of business service contracts.

**Commonality**: The respondents from Art X reported many more cancellation of events which fits with the greater number of individuals and freelancers in its data set.
**Case study: Kerala Government support for artists**

**About the programme**
Announcement of two-month financial aid for artists by Kerala Government

**Situation pre-Covid-19**
The Department, Directorate of Culture, under the State Government, was formed to preserve and promote Kerala’s unique culture. Several cultural institutions function under the department’s umbrella. These include research institutions, institutes, academies including those named after luminaries in various fields, ‘bhavans’ and the Kerala Kalamandalam.

The Department supports projects to carry out its mission and actively recognises exceptional work done by other creative institutions and artists through a number of awards and prizes. The scope of its work extends from wide-ranging activities like the preservation and protection of Kerala’s heritage, history and ancient monuments; and the promotion of the indigenous performing arts; to the observation of culturally significant days, as well as days dedicated to those who have made outstanding contributions to the cultural ethos of the State.

The Directorate of Culture mission is “strengthening the functions and activities of cultural institutions by bringing them in right direction and giving them timely assistance and guidance whenever or wherever needed for fulfilling their commitments in this scenario.”

**The impact of Covid-19**
As the world is dealing with the Covid-19 pandemic, the steps taken by Kerala to prevent its spread have been widely recognised as exemplary in India. The state government’s measures are acknowledged as having minimised the impact of the virus nationally.

But, the economic damage Covid-19 has inflicted on the finances of the state is forecast to be huge. Tourism, is one of the biggest markets, contributing about 10% of the state’s economy. Tourism has come to a halt. In the field of the creative arts, hundreds of daily wage earners in the film industry, along with those associated with festival economies like caterers, artists, event management companies have been hugely impacted.

Rudra Sensarma, economist and Dean, IIM-Kozhikode, says, “Unfortunately Kerala’s economy is mainly dependent on two types of inflows – travellers and remittances. While the tourism sector has already been severely hit by the Covid-19 pandemic, I expect even remittances to slow down as the global economy goes into a recession. Therefore, the economic impact in Kerala is expected to be the most severe among all the Indian states.”

**The Government’s response to the current situation**
Kerala Government’s Department of Cultural Affairs has announced a two-month financial aid of INR 1,000 for artists struggling during the lockdown.

**Innovations made to build strength and resilience**
The application for Covid-19 Distress Relief assistance to artists of different art forms and craftspeople of various crafts can be made through Kerala Lalithakala Academy, Kerala Sahitya Academy, Kerala Folklore Academy, Kerala Chalaiachitra Academy and the Kerala Sangeetha Nataka Academy. Further details regarding the procedure of application had been published on respective websites.

Artists based in Kerala and working in film and television are eligible to apply for this assistance through the website www.keralafilm.com.

Folk artists who have been in the field for 10 years or more can apply for financial aid of INR 1,000 by visiting www.keralafolkloreacademy.com or by sending an e-mail to keralafolkloreacademy@gmail.com.

**Finance and the how programme aims to impact income for the Creative Industries**
The programme aims to provide interim emergency relief to artists in distress in Kerala.

**Individual stories of change**
In these difficult times artists have not only been recipients of relief but have also extended their support. Saji and her daughter Gayathri Saji from Aroor are busy creating new paintings during the lockdown period. Both father and daughter are mural painting artists and they hope to sell their paintings after the lockdown and donate the money they receive to the Chief Ministers Relief Fund. While the shortage of canvases and colours is troubling them, they are hoping to contribute a reasonable amount to the fund.

**Learning from the programme especially regarding sustainability**
The long-term mandate of the Department of Cultural Affairs, Kerala Government has been to preserve and promote all forms of arts and culture emphasising the cultural heritage of the state.

The Directorate prioritised distribution of financial assistance or awarding funds to people of arts and letters, pensions to local artists, showcased renowned artists and writers and enabled employees of various cultural institutions and academies.

Besides, financial assistance it has also extended medical treatment to artists.

The Directorate of Culture also serves as an agency of the State Government to distribute recurring and non-recurring grants to eligible cultural establishments and agencies including Jawahar Balabhavans that foster, promote and disseminate the cultural heritage, knowledge and the distinctive features of traditional and contemporary art forms of Kerala within and outside the country.

The Directorate in continuation of this tradition has designed this interim support.

Case study: StayIN aLIVE

About the programme
StayIN aLIVE is a long-term, sustainable platform for artists to nurture, strengthen and support each other. It is a collaborative effort that aims to give back to the live arts and performance industry in a time of great need, and hopes to create a movement of self-sufficiency within the industry.

StayIN aLIVE was initiated by a group of individuals and organisations who share a common belief - arts are essential to human life. The collective comprises Art X Company, Alok Parande, Artist Aadmi, Big Bang Music, Gully Gang, Kommune, KWN, OML Entertainment, Paytm Insider, Friyanka Khimani, Shark&Ink, Tabhrasa, Tarsame Mittal Talent Management, Tape A Tale, Unmute, and Women of India.

Situation pre-Covid-19
India’s cultural sector is not recognised as a single sector and neither does it have a coherent or unitary culture policy. While a post-independence India saw major state support for culture that included infrastructure and institution building, a post-liberalisation India saw a growing marginalisation of the nature of state involvement in culture and the growth of for-profit creative sectors broadly termed under ‘Media and Entertainment’. (Ref – page https://www.academ-ia.edu/8466234/International_Database_of_Cultural_Policies_Country_Profile_INdia). As pointed out in the India culture policy profile by Ashish Rajyadhaksha, Raghu Tenkayala and P Radhika, ‘state-sponsored culture – of the kind that might be promoted by Indian embassies abroad, or the cultural festivals organised domestically – would gradually lose its credibility, in comparison to other independent, market-driven, community-driven or even corporate initiatives.’ What this resulted in was an emergence of an independent culture sector, without a coherent policy framework to guide its protection, growth and evolution. Thus, the culture sector, comprising a range of individual and self-employed cultural professionals, micro, small and medium enterprises and a few larger cultural organisations and venues is dealt with a mean double hand. On one side, the sector is in a relatively unorganised and informal space, and yet, it is regulated by general laws not particularly suited to its growth and protection. There are few unions and associations to act as buffers and a lack of advocacy groups to advocate for policy-level change. On the other side, its stakeholders are rendered vulnerable to major or minor shifts in the socio-political-economic landscapes, including but not limited to demonetisation, GST and a major health pandemic.

The impact of Covid-19
As the Government of India imposed a strict lockdown on March 23, many cultural events, festivals and arts organisations were significantly impacted through mounting cancellations and venue closures. As reported by EEMA, the events industry was to take INR 1trillion hit. It was in these early days of the lockdown when a few arts and media organisations came together to face the Covid-19 crisis and its impact on the live arts space. Over several brainstorming sessions led by Roshan Abbas, MD, Geometry Global and Founder, Kommune, a performance arts collective, the group decided to launch the initiative StayIN aLIVE, to bring together artistes to support one another and people affected by the ongoing pandemic.

The Platform’s response to the current situation
The StayIN aLIVE initiative aims to build support for the gig workers in the performing arts economy and stands on three legs, ‘educate, inspire and support’. Under the ‘educate’ leg, the platform plans to share knowledge with artistes about ways they can make money online by conducting webinars, seminars and more, through ‘pay as you go’ models. It also aims to educate them about their mental health. The second leg ‘inspire’ will make use of existing social media platforms like Facebook, Instagram, YouTube, etc, to collaborate with these artistes, giving them a great audience reach and allowing a two-way communication.

The third and the last leg is ‘support’, which is essentially a call for funds. The money collected will be disbursed to help gig economy workers through the establishment of an artist emergency fund. The first set of beneficiaries for this fund were to be artists.

Innovations made to build strength and resilience
Clear vision: The initiative aims to educate, inspire and support artists. And to cultivate best practices, encourage thought leadership and become a compassionate, yet impactful and sustained, voice of advocacy for government policies related to the live arts industry.

Campaign development: StayIN aLIVE first decided to adapt to the new realities through a campaign titled #StageBadlega (the stage is changing). The ‘stage’ is no longer the wood paneled, sprawling space with clear entry/exit points and synchronised lighting. It is now a soothing, cozy corner of the library or a neatly organised living room dotted with personal photos. StayIN aLIVE decided to move to the digital platform as a new stage for its activities.

Online arts festival: Using the above thought as a trigger, the initiative launched its first event on 16 May 2020 with over 60 artistes, 24 hours of non-stop content, across multiple platforms and raised over INR 3 lakh in ticketing fees and donations via a campaign fundraising page. Since 15 June, weekend events have been started which are raising ticketing revenue, to be pooled back into the ‘support’ section. These events tap into the ‘educate’ and ‘inspire’ legs of the campaign. https://stayinalive.giveindia.org

StayIN aLIVE Artist Emergency Fund: On 8 June, The StayIN aLIVE Artist Emergency Fund (SAAEF) was launched. SAAEF has been created to alleviate severe financial challenges faced by artists in the Live entertainment sector due to the Covid-19 crisis. The pandemic has put a stop to several major projects and cultural events, leading to a total paralysis of the industry. Among the most vulnerable and affected community is that of the artists. In order to support artists’ tide over this period, StayIN aLIVE has created a ‘personal emergency fund’ aimed at addressing specific financial challenges and as a stop-gap measure. The type of grants will range from small cash grants, reimbursement for a certain class of urgent expenses (such as rent, important bills) and utility payments ‘to third parties, and will be limited to INR 20,000 per applicant per cycle. SAAEF will supply funding to cover unexpected expenses directly resulting from the Covid-19 crisis. This includes the following categories of needs: loss of employment, lack of financial resources, accidents and poor health.
**Finance and how the Platform aims to impact income for the Creative Industries**

In the short term, StayIN aLIVE will continue to raise funds to support artists who are in dire need of it. In the long term, the aim is two-fold:

a) Represent the freelance artist as a collective voice to share best practices, knowledge across subjects, advocate with the Government where needed and impact policy introduction and/or change.
b) Help artists financially either through short team fund disbursement (ongoing) and create opportunities for sustainable income by means of listing and sourcing such opportunities.

**Challenges**

One of the key challenges faced while putting together this initiative is that all organisations were working pro-bono on the campaign. This was being done alongside these organisations navigating the challenges presented by the pandemic within their own business models. This made it difficult for organisations in the collective to balance varied uncertainties while still building a structured approach for development of activities.

As organisations within the for-profit space and limited mandates to build not-for-profit endeavours, the collective initially struggled to consider all the nuances of raising money and putting a fund together. For instance, the collective had never put a fund together and initially struggled with nuances of evaluation on eligibility and assessment of candidates while maintaining the crucial intangible balance around sensitivity and care in responding to the applicants. Support and guidance from organisations such as Indian Foundation for the Arts and the British Council helped navigate some of the challenges.

Another major challenge faced was the perceived privilege of the network of artists that StayIN aLIVE had access to, which made it difficult for raising funds towards their support. A common refrain was, ‘but the folk and vernacular artiste is struggling so much more.’ There’s a case to be made for different initiatives that support different needs of the cultural community.

While StayIN aLIVE aims to target gig workers that include artist and creative professionals, it had to operate on a Minimum Viable Product (MVP) model, which focused on starting small and building scale while strengthening the model as we go along. Morally, these seemed to be a difficult decision to take and something that the collective struggled with.

**Key data**

StayIN aLIVE’s events will continue to cover a range of performing arts through regular digital events and performances, encompassing the aspects of Educate, Inspire and Support. Industry experts will cover all aspects of being an artist – legal, financial, mental, emotional and physical.

Each cycle for application is opened for 10 days and the applications are reviewed by the fund administrator and panel of experts at StayIN aLIVE.

A panel of experts drawn from the arts and creative sectors, academic, legal and social impact disciplines, and organisations that are collaborating on StayIN aLIVE, assess applications which will be accepted in at least two languages to ensure that artists from a wide variety of socio economic classes can apply.

**Learning from the programme especially regarding sustainability**

While on the one hand, the impact of the arts in helping humanity get through the pandemic and the resulting lockdown through its music, dance, art and literature, cannot be denied, on the other, surveys declaring that ‘an artist’ is one of the most useless professions continue to make our job difficult to carve a voice for this community amidst major policy manoeuvres. Advocacy for the culture sector is one of the biggest learnings that we have had and will continue to bring in into our work.

With few government initiatives to support artists and freelancers who are most vulnerable in these times, we learned that self-organising and forming collectives is an urgent step we need to take to buffer us from future shocks of this sort. A formal not-for-profit organisation or an association with a clear mandate to provide emergency funds and support during major global crises is the need of the hour.
Scope to emulate and recommendations
It’s imperative for the culture sector to self-organise and advocate for its growth and support. We recommend that:

• Associations and membership-based organisations be created country-wide that support varied groups within the sector (artists, technicians, arts managers and so on).

• Data and research on impact of Covid-19 on the culture sector to be measured and reported for industry and policy makers’ knowledge.

• Advocacy for the sector is key to support the growth of the sector to prevent its complete deterioration.

• Readily available information on all available funding sources and support possibilities for the culture sector from all State Governments and the Ministry of Culture in New Delhi.

• Explore the possibility of a white paper that outlines policy-based support and relief for the culture sector.

• Publically accessible resources on how to build an association, and develop and disburse a grant.

Literature review summary

Pre Covid-19 context
The Indian arts industry has grown over the last few years by 17% and it holds great potential in terms of its impact on the Indian economy, direct contribution to employment, skills development, supporting high-value ancillary industries.

Concerns on the nature of the industry
The Ministry of Culture, Government of India, set aside these budgets for the Culture sector, over the last 4 years:

<table>
<thead>
<tr>
<th>Financial Year</th>
<th>INR (Crore)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2016-2017</td>
<td>2302.5539</td>
</tr>
<tr>
<td>2017-2018</td>
<td>2530.5049</td>
</tr>
<tr>
<td>2018-2029</td>
<td>2602.1851</td>
</tr>
<tr>
<td>2019-2020 (pre-audit estimate)</td>
<td>2647.0000</td>
</tr>
<tr>
<td>2020-2021 (estimate)</td>
<td>3149.8600</td>
</tr>
</tbody>
</table>

The current context
More than 80% of UNESCO World Heritage sites have closed, threatening the livelihoods of the local communities and cultural professionals, along with impacting the sense of community and cultural lives of people.

The Events and Entertainment Management Association (EEMA) [6]
Around 53% companies saw 90% of their business being cancelled between March-July 2020.
63% companies i.e. around 107 companies suffered from a revenue loss of up to INR 1 crore.

World Economic Forum reports on how Covid-19 is affecting the music industry
The crisis is likely to accelerate underlying trends in the music industry, based on the importance of streaming, which has grown from 9% to 47% of total industry revenues in just six years.

Connecting online and coming together
In India, 94% of music is consumed on mobile and digital platforms, with 34% digital penetration of the population and 500m subscribers on Jio Digital Mobile phones in 3 years since its launch.

In summary
Covid-19 started at a time of increasing global economic vulnerability with concerns about falling consumption, investment and employment. Some of the largest economies stand on the precipice of the greatest recession in the last 100 years. EEMA has forecast industry losses of INR 30 billion (3,000 crore).

There will be a significant change in the way the industry will think, create and collaborate. Greater technical integration, process efficiencies, remote collaboration for creative ideation will alter the way the industry creates content. [10]

Sectors traditionally reliant on face to face engagement with audience (cinemas, museums, galleries, theatres) will take much longer to recover from the pandemic as behaviour takes longer to revert from the extended experience of social distancing and lockdown.

Heva Fund Covid-19 report

33 different sector research projects live in the UK related to Covid-19 Creative Industries Policy and Evidence Centre https://pec.ac.uk/blog/cultural-consumption
In response to the Covid-19 pandemic, British Council India, in partnership with FICCI and the Art X Company launched the Taking the Temperature survey. The survey is aimed at creative professionals, arts companies, sector support organisations, policymakers and funders.

The survey link along with relevant information was circulated amongst 9,500 data sets. The link was live from 15 May to 12 June 2020. 368 respondents were surveyed until 12 June 2020 - 318 through the British Council and 50 through the Art X Company.

The report has been peer reviewed by Ian Thomas (Head of Evidence, Arts); Anvesha Khandewal (Head of Research, Monitoring and Evaluation, India) British Council; Rashmi Dhanwani (managing director) the Art X company and Vikash Kumar FICCI.

Hindi, Tamil and Bangla language translations of the survey undertaken by the Craft Revival Trust.

The data cuts across sectors as the survey reached to advertising, architecture, visual arts including painting, illustration, photography, sculpture, public and street art, design, film or video, literature and publishing, performing arts, new media arts including gaming craft, venues including theatre, cinema, gallery, park. The data records geographical representation with 67% of the respondents from across the country.

The survey seeks to understand the immediate impact on artists livelihoods, arts organisations and their audiences, strategic response by governments, NGOs and major stakeholders to ensure the sector survives, recovers, and grows. It aims to identify factors which will ensure the sector remains resilient, responsive and relevant and finally evidentially reflects on how the arts and creative sector may look like in the long-term and how government interventions could support sustainability.

In terms of presentation and analysis, the data records and reports on the current circumstances in the above mentioned creative sectors. The report presents findings gathered by the British Council and Art X Company - separately, while also reporting on the commonalities between data points. We have also included case studies of resilience in action across the creative economy sector. The case studies provide glimpses of initiatives taken by both the private as well as the government sectors.

The secondary research provides the backdrop to the context prevailing in the Art sector, and for that, we have drawn on market insight from research and reports of counterpart organisations.

In terms of overall methodology, the survey will be conducted 3 times over 9 months, to present both the changing and emerging trends. The next survey will also be conducted in Hindi, Bangla, Malayalam, Telugu, Kannada and Tamil.

The data and analysis in this report is General Data Protection Regulation (GDPR) compliant, to ensure confidentiality of commercially sensitive research findings.
Part 5

Annexes

Literature Review

A. Pre Covid-19 Global Context

1. Art and Culture - the thread of resilience

- Arts and culture are now more than ever the thread of resilience that binds us in one fabric.
- The creative and cultural industries (CCIs) are one of the fastest growing economic sectors in the world. In many countries they are growing at double the rate, of the economy as a whole.
- In the UK they contributed £101.7 billion to the economy, that is £11.5 m an hour in 2018 (DCMS, 2017). They generate quality jobs faster than any other sector. Global figures from the United Nations tell us that in 2015 they contributed US$2,250 billion to the global economy and employed almost 30 million people. [1]
- The Indian arts industry has grown over the last few years exponentially and it holds great potential in terms of its impact on the Indian economy, direct contributions to employment, skills development, supporting high-value ancillary industries.
- Apart from their economic worth CCIs are more than economic generators and play a fundamental role in building our sense of culture, identity and values beyond the commercial.

2. Concerns on the nature of the industry

In the last 4 years the Ministry of Culture, Government of India budget for culture was

Table: Budget allocation for Culture

Nature of the Industry

India’s cultural sector is not recognised as a single sector. In the absence of a central culture policy, operations within the sector still span across the spectrum of the arms-length funding model and the reliance on the market model. Mandates for regulation are further fragmented into existing structures within the Indian economy. As a result, there are no systems to cohere the vast range of practices and professionals working in this space. Most initiatives are driven by individual passion and non-profit organisations, who struggle to maintain themselves and the organisations they run. This has led to several barriers to growth for the sector – both ideological and economic.

- In the crafts sector artisans – draw upon community heritage for their teaching and making of art. The handicrafts sector benefits from a mix of government policy and not-for profit sector intervention which gives access to markets both as localised communities and individuals.
- Independent artists and creators from more urban and contemporary art contexts tend to work as individuals or small collectives and groups (e.g. bands, dance troupes for example). They are less likely to have institutional alliances unlike in the West (e.g. ballet dancers at the Royal Ballet or musicians in orchestras such as the LSO). In India, the lack of formal structures forces artists to work independently as they do not have access to large organisations who, through their business structures and policies, can also serve as safety net.
- Formal (Trade Unions and Management bodies) and Informal (sector collectives and consortia) are few. In the former this mitigates against a collective approach for protection of employment rights for the workforce; and the latter impedes the ability to pool resources and expertise to speak with one voice.

Industry workforce

Broadly, Indian employment statutes recognise two categories of workforce: 1) workmen and 2) non-workmen. Typically, labour legislations pertaining to bonus, minimum wages, provident funds and so forth are only applicable to such workmen and typically not non-workmen (i.e. not freelancers).

The inclusion or exclusion of freelancers and consultants within the workforce framework of such labour legislations has always been a moot point and has been analysed by the judiciary on a case-by-case basis. Such uncertainty puts freelance artists and independent creative professionals in a precarious position and makes them vulnerable to economic slow-downs and recessions.

3. Sector snapshots

Crafts

- Lack of authentic and adequate data on crafts personnel, including their livelihood conditions, families’ details, and socioeconomic status is a major bottleneck that affects planning and policymaking for the sub-sector. Artisans are dependent on middlemen and trader entrepreneurs to sell their products. [2]

Visual arts

- The Indian art market has seen collectors becoming more knowledgeable of art and aware of their own tastes. Also, while the industry has seen growth during the last four years, its share of the global art industry stood at a miniscule 0.5 per cent in 2016. However, with Indian art finding more suitors in the domestic as well as international markets, the industry holds massive potential for growth and could become a sought-after art hub globally. [3]

Music

- The organisation that represents the recorded music industry in India, in its Digital Music Study 2019, examined the ways in which music consumers aged 16 - 64 engage with recorded music in India. Report highlights most people (80 per cent) identify as ‘loving’ or being ‘fanatical’ about music, much higher than the global average of 54 per cent. Copyright infringement remains a challenge for the music ecosystem. 67 per cent of all surveyed used unlicensed methods to listen to or obtain music in the past month, while 63 per cent used illegal stream-ripping services. Thanks to cheap data and smartphone penetration music consumption in India is growing regionally. The growth rate will be higher in the regional segment due to a low smartphone base. [4]
B. The current context
The health crisis brought on by Covid-19 has been unprecedented in its impact on lives, livelihoods, and our socio-economic-cultural situation. While people around the world turn to culture as a source of comfort and connection, the impact of Covid-19 has not spared the culture sector.

- More than 80% of UNESCO World Heritage sites have closed, threatening the livelihoods of the local communities and cultural professionals along with impacting sense of community and cultural lives of people.
- Artists across the world, most of whom were already working part-time, on an informal basis or under precarious contracts, are struggling to make ends meet.
- Another fallout is the large numbers of artists, technicians, sessions musicians being rendered unemployed with the closure of film production, live events, F&B sector.

GDP figures released in May 2020, show India’s economy slowing to a 40-quarter low of 3.1% (y/y) in Q4 of FY2019-20 (Jan-Mar 2020). On an annual basis - both exports and imports have sharply contracted in 2019-20, by 0.6 and 3.8% respectively. The economy was already slowing sharply before Covid-19, but significant downward revisions to GDP growth in previous quarters imply the slowdown was more pronounced that what the slowdown was more pronounced that previously thought. The downward revisions have been mainly due to lower growth estimates for the following sectors - trade, hotels, transport and communications, financial services, and real estate.

C. Recent surveys
1. In order to evaluate the impact of Covid-19 worldwide, last April, the International Exchange for The Performing Arts (CINARS) launched a survey among thousands of professionals throughout the world. CINAR received 844 responses, including 737 complete ones, hailing from 45 countries spread over 5 continents, which give a snapshot of the impressions and expectations of the profession at large. Among the respondents, 40.3% are creation companies, 37% are international programmers, and 18% are artist representatives. Results indicate:

   - international activities in 2020 have been postponed (38.1%) or cancelled (39.9%).
   - despite the tireless efforts by show presenters, cancellations in 2020 are bound to increase, given how the situation is evolving.
   - 60.8% of those polled expected the recovery of their normal international activities to take place by the summer of 2021.

2. The Events and Entertainment Management Association (EEMA) recently conducted a member survey with 170 companies that were affected by Covid-19. Some of the key findings of the report

   - around 53% of companies resulted in 90% of their business being cancelled between March-July 2020.
   - 63.1% companies i.e. around 107 companies suffered from a revenue loss of up to INR 1 crore.
   - around 7 companies envisage a 50%-80% retrenchment of their current workforce and 35 between 25%-50%.
   - the ideal working capital/loan expected to keep afloat for the next 6 months is around INR 2.5 crore for 39 companies and INR 1.2 crore for 118 companies.
   - around 97 companies will need to raise capital or debt from institutions or shareholders, VC funding etc.

3. World Economic Forum Reports on how Covid-19 is affecting the music industry

   - The music industry has been hit hard by Covid-19 with live performance revenue the biggest casualty. A six-month shutdown is estimated to cost the industry more than $10 billion in sponsorships, with longer delays being even more devastating.
   - The industry is fighting back with new ways to monetise music consumption and innovative models: Fortnite hosted a live rap concert that attracted nearly 30 million live viewers.
   - The crisis is likely to accelerate underlying trends in the music industry, based on the importance of streaming, which has grown from 9% to 47% of total industry revenues in just six years.
   - Recently reported in UK Parliamentary questions, it takes over 7,500+ downloads to earn equivalent of 1 hour’s minimum wage. The music sector therefore has become increasingly reliant on live performance in venues and the festivals circuit.

D. Connecting online and coming together

- Amid this global emergency, arts and culture continue to adapt to survive for entertainment and more profoundly as repositories of histories and human connection. The surveys conducted demonstrate the demand and need within international culture networks to keep programming and creating.
- Technology has provided a platform for artists and audiences to meet and share online. While income generated from online platforms is minimal and unreliable as a replacement for lost ticket income and sales over the long-term.
- In India 94% of music is consumed on mobile and digital platforms, with 34% digital penetration of the population and 500 million subscribers on Jio Digital Mobile phones in 3 years since launch. (1. Nielsen Music Report 2018 and 2. OTT Video Future Trends (Red Star Consultancy).
- While the increase in digital opportunities may reach plateau or saturation point for some audiences online is not offer a satisfactory alternative for many arts audiences.

Digital platforms are being used for in manifold ways. Some examples include:

The Jaipur Literature Festival has developed an online property of author dialogues. Brave New World brings together journalists, novelists and academics from arts, science, economics, faith etc to discuss and share concerns. Since the launch, the first 50 editions have reached over 1m viewers online. However, all activity is freely available online in the spirit of JLF but with minimal income generation toward the digital festival.

With the well-being of his grandparents on his mind, Shanghai-born Duyi Han, 25, a designer based in Los Angeles and New York, began to paint the medical workers in their white protective suits, gloves and masks, the leading fighters of the global war against the deadly coronavirus, in oil on canvas and digital images. His new body of work, The Saints Wear White, has gone viral on social media and shows medical workers as central protagonists in the frescos and traditional paintings that adorn church walls. They are a far cry from their usual colourful biblical themes. [7]
E. Creativity takes courage during Covid-19

Art is a universal language that crosses borders, which can be used to express pain, suffering and the damage that this pandemic has brought to people all over the world. And today it is the artists themselves who are staring at the gaping chasm between the haves and the have-nots, even within the community. The lack of work and deteriorating financial situation compelled artistes to take extreme steps. In rural India, families are dependent on the arts and crafts as primary means of livelihood, and as a secondary mode of income, especially in the agrarian communities. Like the Adivasis in Odisha’s Sadeibareni village who make and sell dokra (bell metal) art in between the two paddy-harvest seasons. The craftspersons don’t fit into the MSME category, they are out of the security blanket, have no salaries, provident fund, or insurance. Dastkar founder Laila Tyabji says her findings estimate about 200m people including the craftsperson’s families and ancillary workers who are in dire straits. [9]

F. In summary

- Covid-19 started at a time of increasing global economic vulnerability, with concerns about falling consumption, investment and employment. Some of the largest economies stand on the precipice of the greatest recession in the last 100 years. EEMA has forecast industry losses of INR 30 billion (3,000 crore).
- Arts and Culture will need to respond, to continue to contribute, to promoting equality and inclusion for diverse artists and audiences at most risk. Organisations will need to manage financial risk and innovate business models to emerge stronger.
- Digital media businesses have fared relatively better, especially on the consumer side. Digital consumption has seen rapid growth in India and this is likely to accelerate materially during and beyond Covid-19.
- There is likely to be long term shift in the integration of digital tools with media and entertainment sectors the immediate beneficiaries. This may not be equally consumed across socio economic groups and the digital divide may deepen in developing economies as a direct consequence of Covid-19.
- There will be significant change in the way the industry will think, create and collaborate. Greater technical integration, process efficiencies, remote collaboration for creative ideation will alter the way the industry creates content. [10]
- Sectors traditionally reliant on face to face engagement with audience (cinemas, museums, galleries, theatres) will take much longer to recover from the extended experience of social distancing and lockdown.
